Wiha stainless steel.

For perfect fastening and unfastening.

Stainless steel has become all-present. Its ascent in the past decades has been due mainly to some outstanding qualities:

Durable and versatile

Extremely resilient, corrosion- and acid-resistant, weather-resistant, easy to process, hygienic and easy to clean – a material cannot be complimented more highly.

Pure

On the one hand this characteristic reflects the refinement of the high-alloy composition of stainless steel. But on the other hand it also bears witness to its noble appearance and lordly emanation.

Conserves resources

Stainless steel can be recycled up to one hundred percent. This spares natural resources, making this quality an essential feature not just for today but for the years ahead.

Essential

All of these qualities have made non-rusting stainless steel a leading material for maximum quality requirements in both the interior design and building construction sectors. And in all areas and dimensions: from a single screw to a building facade, and from the rivet of a ship to complete shipbuilding. Areas with future-fit technologies such as solar technology would not be the same without it. Non-rusting stainless steel also plays a dominant role in sectors such as automotive engineering, the foodstuffs industry and offshore applications.

Non-rusting

Stainless steel does not inevitably have to comply with the demands made upon non-rusting steel. And likewise, non-rusting steel is not categorically stainless steel. Decisive for the definition of stainless steel is the alloying component of the various types, for example low-alloy or high-alloy stainless steel. This factor is exactly specified for each type. One thing's for sure: a non-rusting stainless steel must contain at least 10.5% chrome.

But rust can also collect even on non-rusting stainless steel. The cause: contact with a "foreign", i.e. a non-stainless steel tool. This leaves foreign particles upon the stainless steel surface that then rust. This "extraneous rust" is not only a blemish, but in the form of pitting can become a real safety threat.

That's why:
non-rusting stainless steel needs non-rusting stainless steel tools.

Only with non-rusting stainless steel tools is the transfer of foreign particles and therefore the cause of rust eliminated.

Passive protects active

The simple trick for long life: when the chrome surface, either in air or water, reacts with oxygen, a wafer-thin protective layer is created, the so-called "passive layer". It consistently repels aggressive substances. In addition it has the capability to regenerate ("self-healing"). An additional hardening, a characteristic of all Wiha stainless steel tools, reinforces this characteristic.

It's a question of chemistry: the stainless steel sortiment from Wiha.

The popularity of stainless steel can be seen at the "basis" as well: since the middle of the 90's, the use of stainless steel screws has risen enormously. Here though risk of extraneous rust is particularly high.

The wide-ranging and versatile application possibilities for non-rusting stainless steel or stainless steel screws today place high demands upon tools.

Wiha SoftFinish® stainless steel screwdrivers.

Specialists for tough jobs.

For slotted and Phillips screws.

308ST SoftFinish® stainless steel slotted screwdriver.
Hex blade.
Blade: High-quality, non-rusting stainless steel, completely vacuum-hardened.
Handle: Ergonomic Wiha SoftFinish® multi-component handle with roll-off protection.
Standards: Material: DIN ISO 2388, DIN EN 10 088.
Output: DIN 5265, DIN ISO 2380.
Application: Ideally suitable for fastening and unfastening of stainless steel screws.

Bit holder.

7148ST CentroFix stainless steel quick release holder, style E 6.3. Blister packed.

Sleeve: Metal, coated.

Bit holder: Of high-quality, non-rusting stainless steel, therefore recommended for use with stainless steel bits.

Suitable for: DIN 3126, ISO 1173, style D 6.3 + F 6.3 and double bits.

Drive: DIN 3126, ISO 1173, style E 6.3.

Application: Whenever the bit needs a secure and zero-play hold.

Optimised for the use of long bits.

Extra: Due to the special holding mechanism, this bit holder holds all types of bits with 1/4" hex drive.

The play between bit and holder is reduced to a minimum.

Real single-handed operation for fast bit exchange.
